Congratulations on your purchase of the Nautilus Drydocks Micro Torpedo Timer.

This is a very compact timer switch that allows for repeated use of a battery-powered torpedo in your remote controlled submarine. By connecting or disconnecting two wires, the builder can select run times of either 3 or 5 seconds, ensuring that your weapon doesn't run away from you in a large pond or pool.

Specifications:

- Working Voltage: 2V to 6VDC
- Max Load: 7A
- Board Size: Approx. 10 x 16mm

Wiring instructions (see diagram)

1. **Timer setting: default (unconnected) is 5 second run. Connect to #3 for 3 second run times.**
2. **Switch lead in**
3. **Switch lead out**
4. **Battery - in**
5. **motor -**
6. **Battery + AND motor +**
